This site is not available in your country This site is not available in your country Desktops may not get all the attention and scope that laptops and tablets do, but they have a big advantage over any other mobile device: uncompromising features and performance. Closes one of the Clevo ODM laptops, which literally has all the components of the desktop stuffed in an oversized 17-18-inch chassis, every laptop on the market uses mobile technology that is limited by power and packaging. Tower-style desktops don't have such restrictions, with plenty of space and affordable power to provide juice for a large number of high-quality components. The Dell XPS 8500 uses the Ivy Bridge Intel Core i7-3770 with four cores, Hyper-Threading, HD 4000 graphics, and watches from 3.4 GHz to 3.9 GHz. The most common mobile chip, the Core i7-3612M, shares all the same features, but only watches between 2.1 GHz and 3.1 GHz. While the 3612M is a fast chip, you still give max performance stock and some of this instant responsiveness that we all love. With this XPS 8500 model, you also get a ton of other features not even available on most laptops, much less ones in the same price range as this desktop. It also comes with 8GB of RAM, a 2TB hard drive, and a Radeon HD 7570 graphics. A good bonus to the XPS 8500 is the standard 802.11n WiFi and Bluetooth 4.0, something we are used to only seeing as additional add-ons. As another example of the lack of compromise, you'll also get a full set of ports including four USB 3.0, six USB 2.0 (including one that can charge mobile devices), VGA, HDMI, Ethernet, and a 19-in-1 card reader. The internal extension includes two 5.25-inch optical compartments, two 3.25-inch hard drive compartments and four DIMM slots. Trying to find everything in a laptop, much less one that costs less than \$800. Through November 12, you can get this XPS 8500 for just \$779.99 with free shipping, after \$170 instant savings.
